Structural Strategy For Your Residential Renovation And Construction.

With 17 years of experience and over 4,000 projects completed, ad structure adopts a client-first philosophy that puts your best interests at the heart of every decision.

We believe in asking different questions, exploring possibilities, and approaching each project with curiosity, creativity, and respect for your vision.

Whether you're renovating or building a new home, our mission is to deliver intelligent, considered engineering solutions that bring your dreams to life—efficiently, cost-effectively, and with the personalised attention you deserve.

Our Story

Founded by Adrian Dine in 2007, ad.structure is a specialised residential structural engineering firm dedicated to transforming homes and enhancing lifestyles.

At ad.structure, we don't just answer your questions; we explore different possibilities and approaches that could better achieve your desired outcomes.

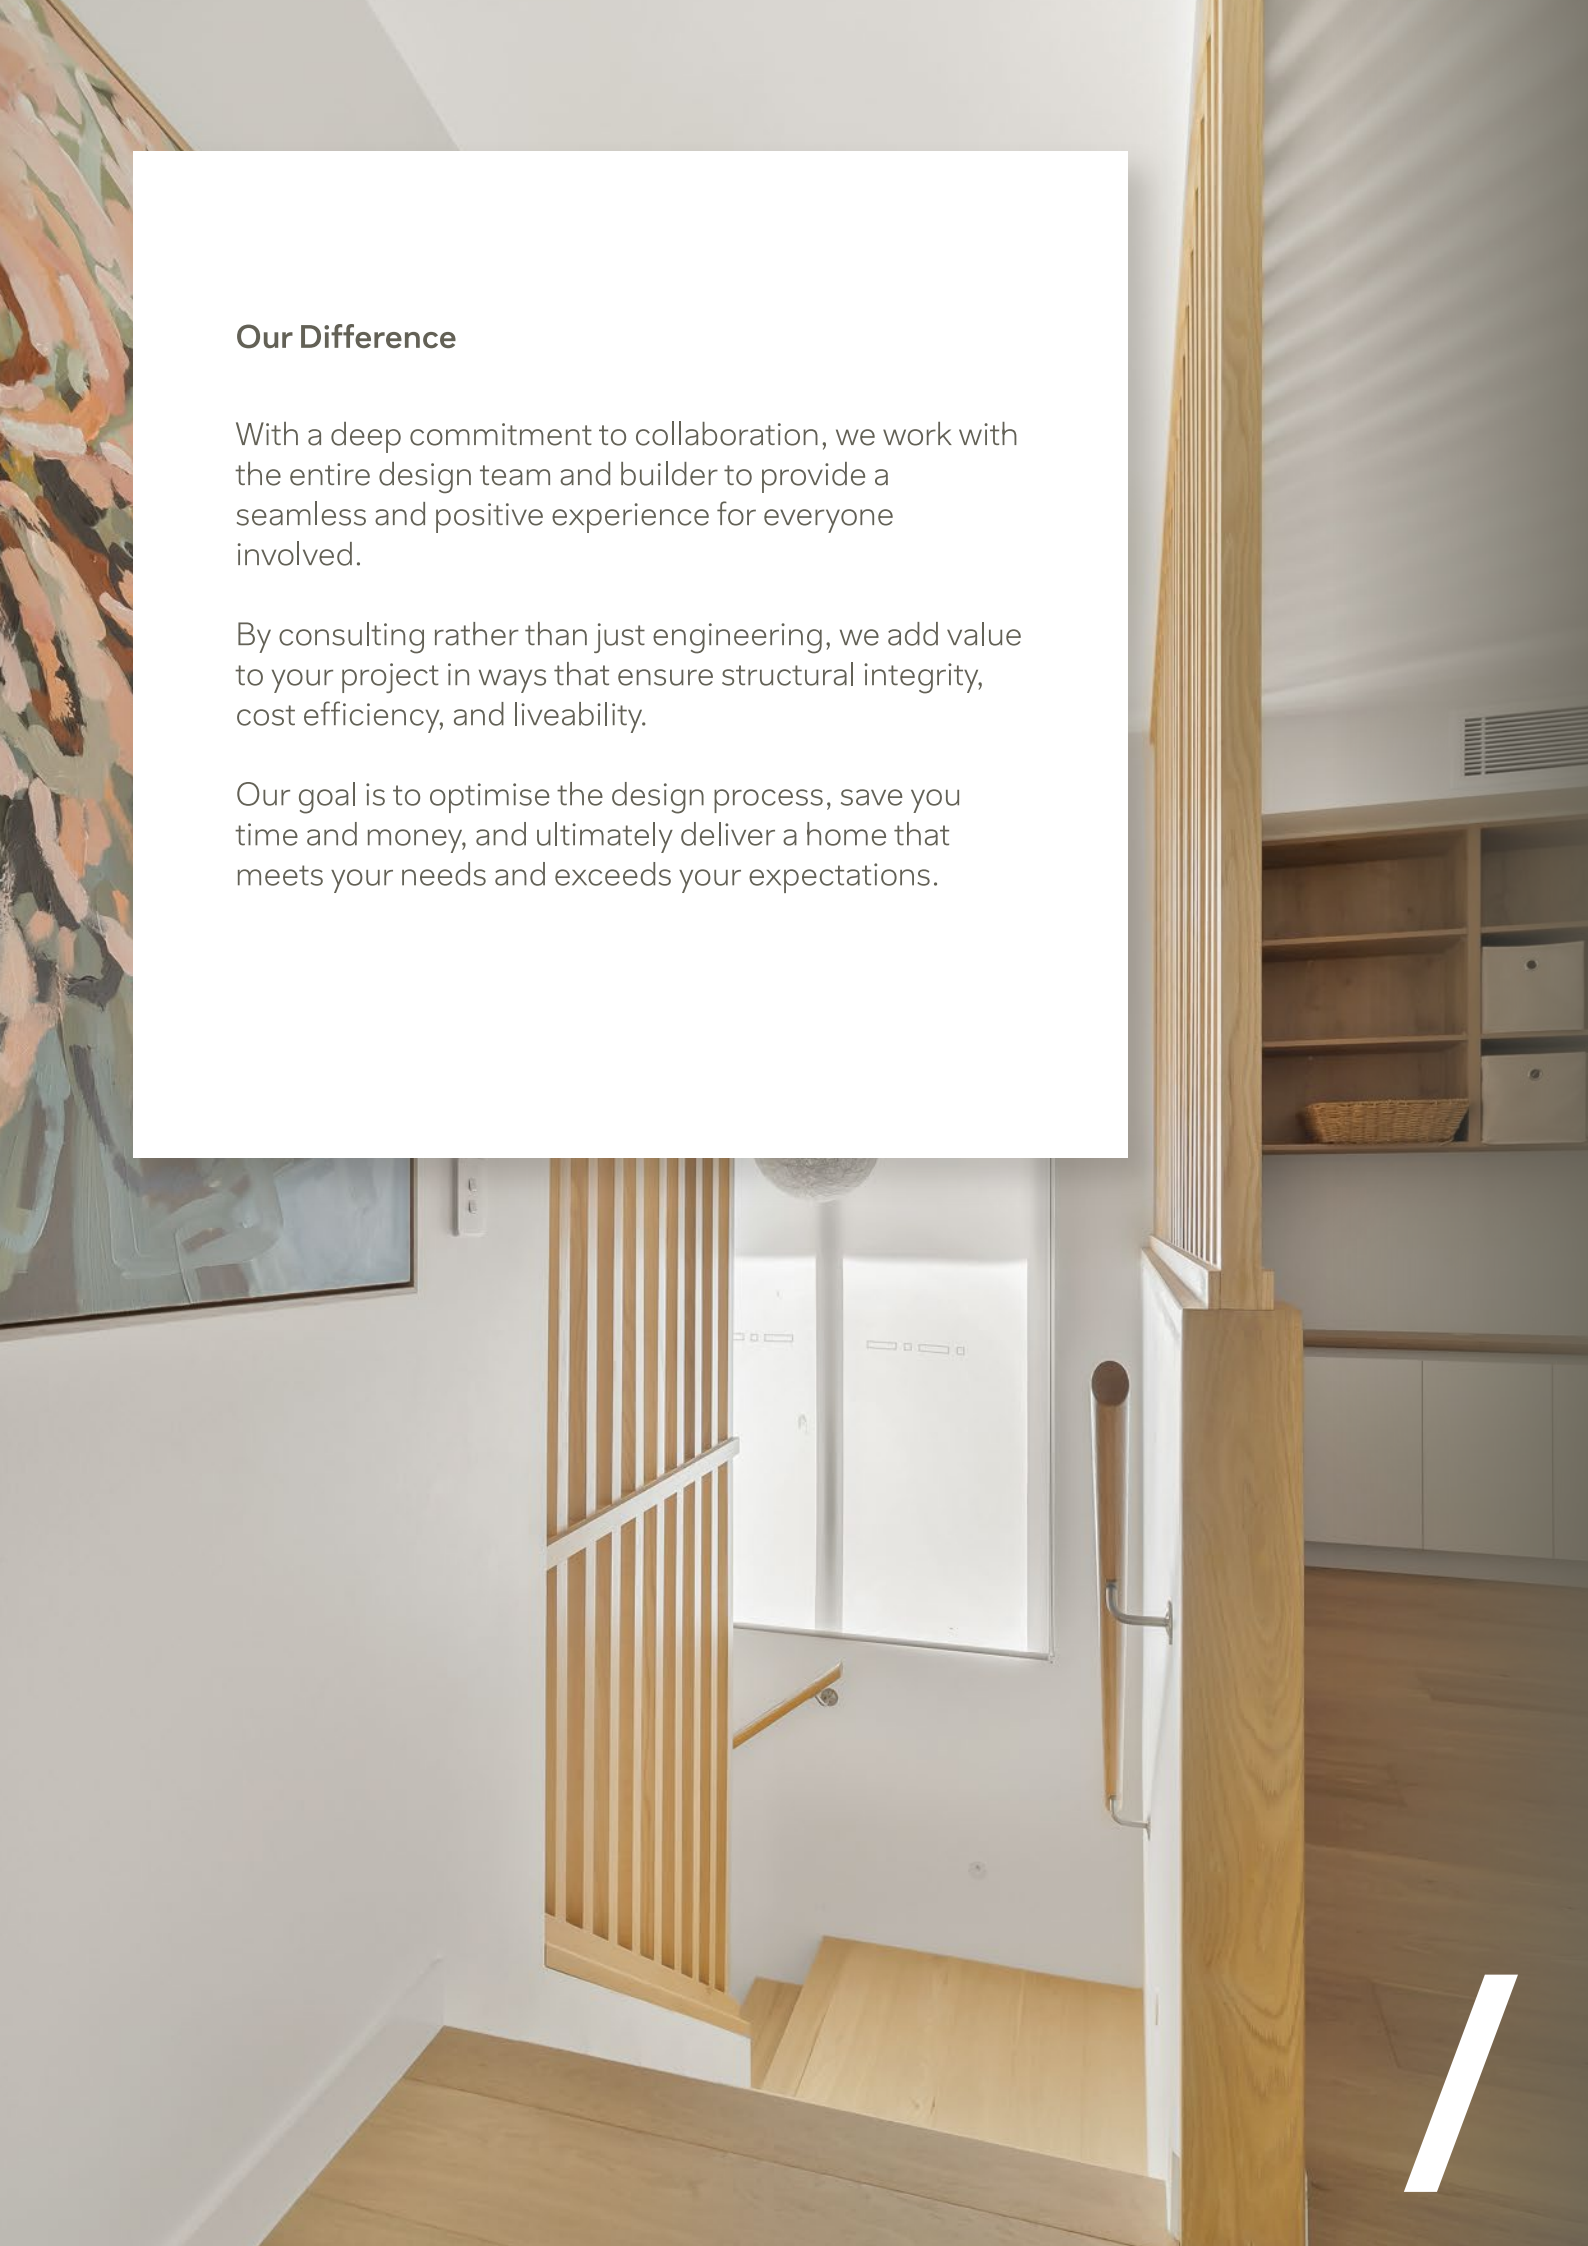

Our nearly two decades of experience in home renovation and new home design have allowed us to walk alongside countless homeowners, helping them navigate budget constraints, scope challenges, and the overall design process.

Our Difference

With a deep commitment to collaboration, we work with the entire design team and builder to provide a seamless and positive experience for everyone involved.

By consulting rather than just engineering, we add value to your project in ways that ensure structural integrity, cost efficiency, and liveability.

Our goal is to optimise the design process, save you time and money, and ultimately deliver a home that meets your needs and exceeds your expectations.

Engineering
For Home Renovations

Renovating your home is an exciting but complex process. At ad.structure, we ensure that your renovation is practical and cost-effective by exploring multiple approaches to achieve your goals.

We bring our wealth of experience to every project, identifying potential challenges early on and offering solutions that minimise disruption and maximise liveability.

Whether creating open-plan spaces or managing an extension, our innovative structural solutions make your renovation smoother and more affordable.

Our philosophy is rooted in collaboration—working with, not against, the entire design team to deliver the best possible outcome.

We understand the importance of keeping homeowners informed and involved, ensuring that every decision made aligns with their vision and budget.

Engineering
For New Home Design

Building a new home is a significant investment; we're here to ensure it's done right. By bringing our extensive experience to the design phase, we help you identify potential challenges early and offer solutions that save you time and money.

Engineering is not just a support function for us; it's the lifeblood of design. Engineering drives the design process, ensuring that your new home is structurally sound and financially sustainable.

Our approach is about more than just meeting regulatory requirements; it's about delivering value at every stage, from the initial concept to the final build.

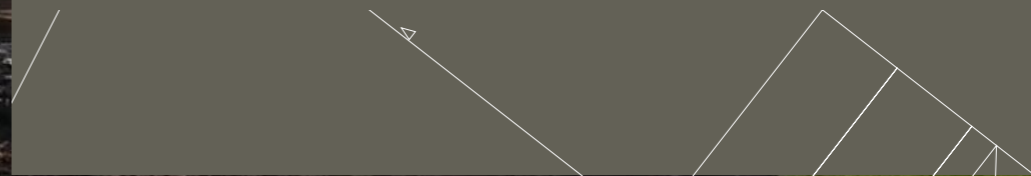

We pride ourselves on being more than just structural engineers; we are your partners in realising your vision.

Our goal is to optimise the design process, save you time and money, and ultimately deliver a home that meets your needs and exceeds your expectations.

Problem Solving
Structural Consultation

Every project is unique, and so are the challenges that come with it. We offer tailored consultation services to help you navigate the structural requirements of your home project.

Whether you're in the early planning stages or mid-construction, we provide expert guidance that enables you to make informed decisions.

Our consultative approach ensures that your project remains on track, with a focus on understanding your needs, concerns, and goals.

At ad.structure, we are problem solvers who work methodically to identify constraints, opportunities, and solutions that best satisfy all the criteria.

Our commitment to curiosity, creativity, and communication ensures that you are included every step of the way.
